DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, a block diagram of the system illustrating the claimed features must be shown or the feature(s) canceled from the claim(s). In particular a diagram similar to that of Lempel's figure 5, showing the means for obtaining the digital coefficient information as well as the means for determining the motion vector based on said coefficients, and the features in claims 29 and 30 must be shown. No new matter should be entered.

Corrected drawing sheets are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 2613

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 26 and 28 are rejected under 35 U.S.C. 102(e) as being anticipated by Lempel.

Claims 26 and 28: A method of converting a frame of digital video data from a first format to a second format, comprising the steps of:
obtaining digital coefficient information representing pixel information of a first frame in a first format; and (See Lempel figure 5 item 106A)
determining a motion vector representing the difference between a first frame in a second format and a second frame in the second format based on the digital coefficient information, wherein the first frame in the second format corresponds to the first frame in the first format. (See Lempel figure 5 item 250, note that the DCT coefficients are used to produce a motion vector, the end result of the method is taught in column 17 lines 4-11. For a detailed explanation of how he derives his vectors using the coefficients see columns 15 and 16 explaining the steps illustrated in figure 6.)

Allowable Subject Matter

3. Claims 27 and 29 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The combination of elements claimed in particular obtaining an integral projection

array using a one-dimensional inverse discrete cosine transform was not found in a prior art search nor considered obvious by the Examiner.
